

Step-by-step guide on how to insert and use the Trading-Bot in TradingView:

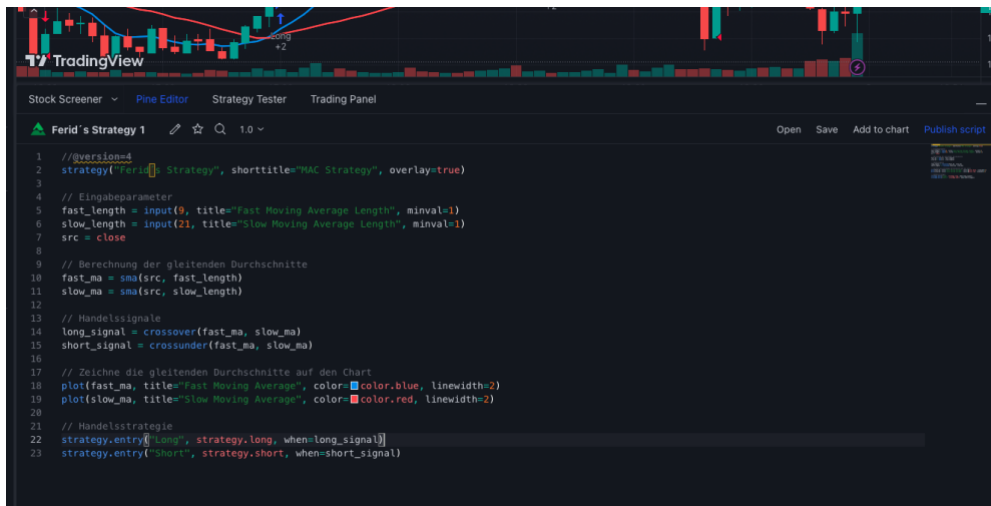

1. Open the TradingView website (<https://www.tradingview.com>) and log in to your account. If you don't have an account yet, create a free account.
2. Once you're logged in, select the asset you want to apply the strategy to. For Apple, search for "APPL" in the search bar at the top of the page and select the desired trading pair from the list.

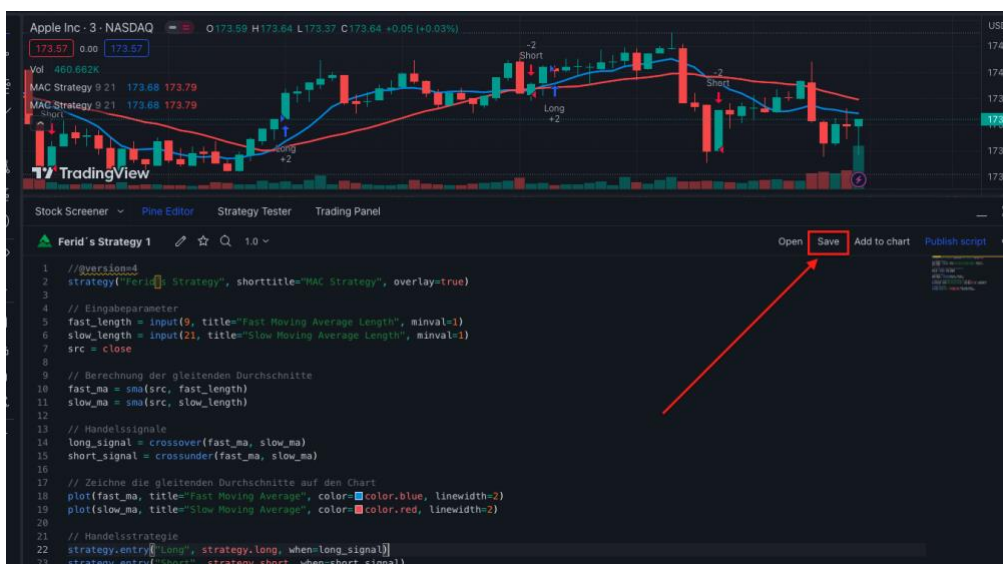

3. Now, click on the "Pine Editor" tab at the bottom of the screen to open the Pine Script editor.

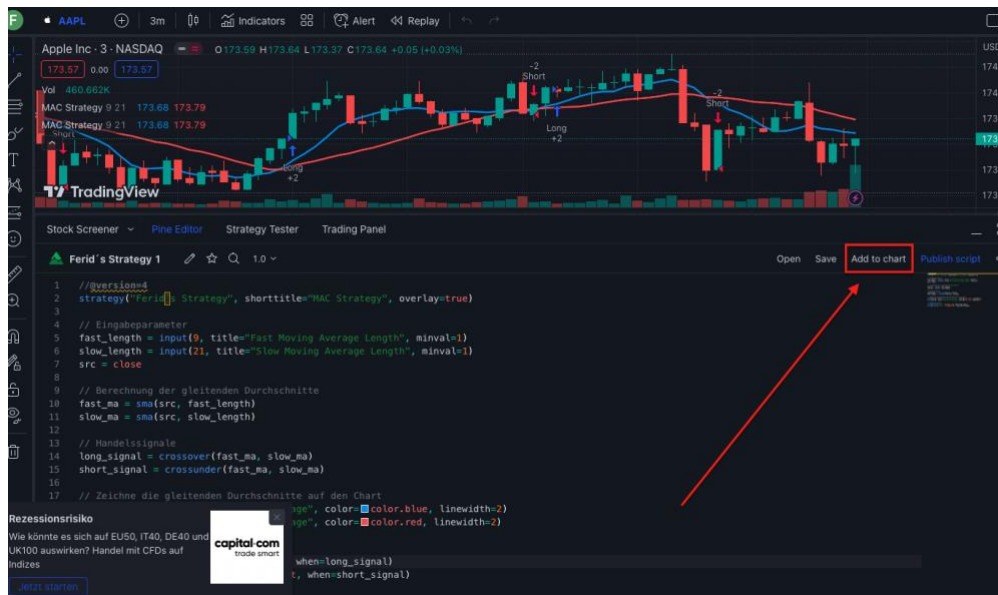

4. Delete any existing code in the editor, and then copy and paste the provided Pine Script code into the editor.

- Click on the "Save" button (floppy disk icon) in the upper right corner of the Pine Editor. Give your script a name (e.g., "Moving Average Crossover Strategy") and click "Save" again.

- To apply the script to your chart, click the "Add to Chart" button located in the upper right corner of the Pine Editor. You should now see the moving averages plotted on the chart, and the strategy will appear in the "Strategy Tester" window at the bottom of the page.

- To view the performance of the strategy, click on the "Strategy Tester" tab at the bottom of the screen. Here, you can review various performance metrics such as net profit, number of trades, win rate, and more.
